

METAL DOOR COLLECTIONS

PERFORMANCE

European Standard Security Integrated Lock

The entire lock guard is made of stainless steel and combines with 11 locking points to form an integrated multi-point lock with anti-pry performance. The ultra-C-level double-blade serpentine lock cylinder prevents technical unlocking and ensures complete protection of the door's core security. It eliminates the risk of violent damage to the security system and forced opening of the lock cylinder, providing comprehensive protection for your beloved home!

Aerospace Soundproof Cabin Sealing Technology

Dual-layer sealing design with a 75mm 'vacuum' interior for enhanced sound insulation, improving soundproofing and moisture retention by 2 times. TZ-type interlocking structure, closely integrated with zero gaps, offering effective moisture retention and silent operation. Embedded partition sealing technology with 20mm flexible sealing strips for superior moisture retention and soundproofing. Aerospace-grade multi-airbag sealing strips, advanced foaming flexible technology, high temperature resistance, aging resistance, and stable performance.

Stainless Steel Solid Silent Door Hinge

Kegas uses pure stainless steel 304# material, solidly precision-cast, ensuring high material strength. It features German technology silent bearings for smooth, quiet operation when opening and closing the door. The hinge is durable, offering a silent 180° opening range. It is rust-resistant, with a load capacity of up to 500kg, ensuring safety and reliability. The hinge has a lifespan of over 30 years, without sagging or deformation.

Material Surface Treatment

The main material of the door panel is high-end stainless steel (with electroplating process, fluorocarbon paint process, etching process, precision heat transfer printing, real copper plating process, etc.). The design is fashionable and elegant, with high hardness. It is environmentally friendly, heat-resistant, safe, rust-resistant, and highly resistant to damage, making it sturdy and durable.

Carefully selected hardware, rigidity

increased by more than five levels.

Kegas hardware accessories are in line with international standards, produced according to European standard manufacturing processes. The material used is 304# stainless steel, with a strength level twice that of ordinary steel, high oxidation resistance, strong corrosion resistance, and an aesthetically pleasing, durable metallic texture.
